Pre-Press solutions

*Pro6 Repro is a unique pre-press company, specialized in producing printing plates for the Dry-Offset and Flexo industry. With over 25 years of experience and the use of state of the art equipment, we are able to supply products of the highest quality. Our expert team works with a global customer base, creating laser-engraved, CTP UV-laser exposed and conventional plates, while also offering a complete range of services and support, including handling of all pre-press, guiding the printing process, give training and provide advice and assistance.*

*Through a long and successful cooperation with machine builders, designers and printers, Pro6 Repro has become a leading pre-press partner for the international Dry-Offset and Flexo market.*

*Globally, Pro6 Repro has proved that distance is no object when it comes to delivery and guidance. Our specialists are always on hand to offer their services in your own country. Assisted by our agency in the UK, we can provide you with an international, flexible and professional team.*

## *What we offer you*

*At Pro6 Repro, your packaging is our product. We aim to make your packaging exactly how you envisaged it, with an end result which is as clear and sharp as possible. Quality, attention to detail and unrivalled service come as standard. Our range of services and products are entirely geared to your wishes.*

*Besides the pre-press process we can also take care of your design requirements. Being involved at such an early stage means we can establish a keener understanding of your exact needs. This dedicated creative support enables us to get the best out of your packaging. From initial design concept you can be assured of a design which is within the limitations of the Dry-Offset process. From the very first digital or paper proof you are looking at something which actually represents the final printed product.*

*Designs and reprographics not only matched to the Dry-Offset process but to the individual print house and even tailored to your individual printing machine.*

### ***Pre-press for Dry Offset and Flexo***

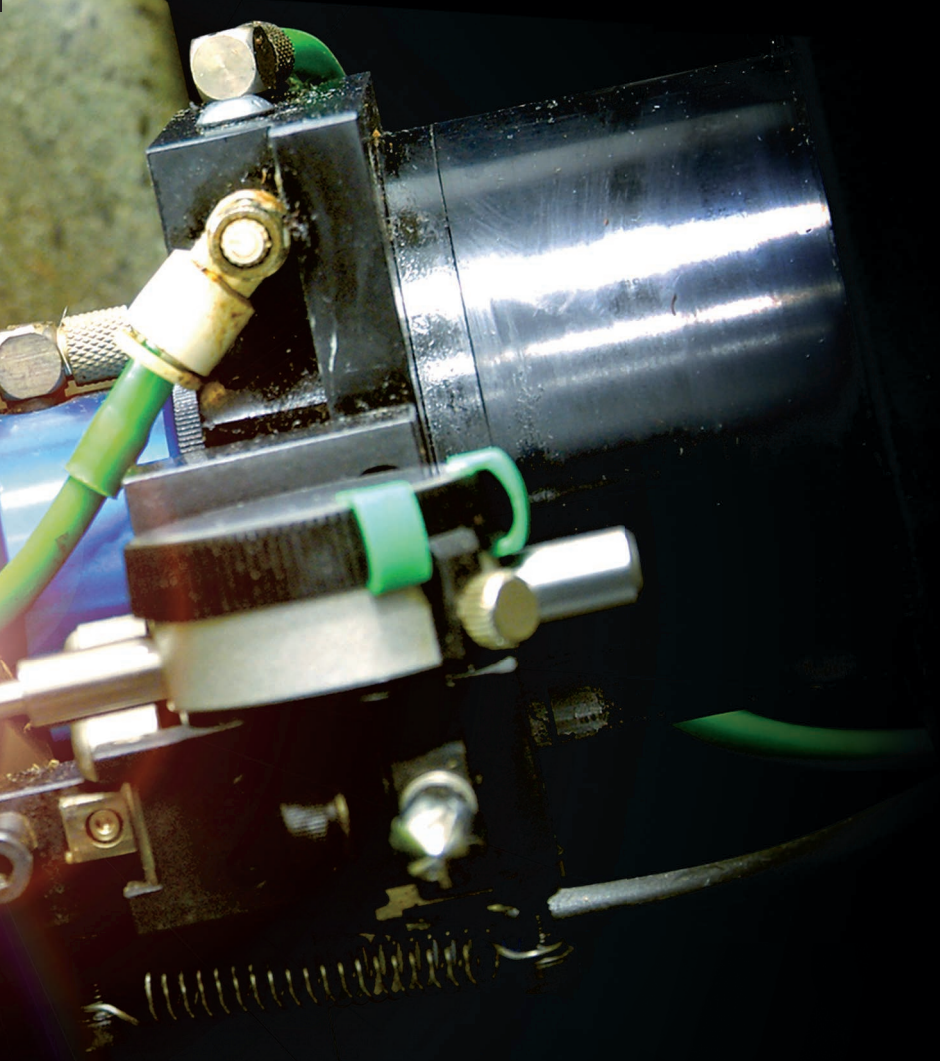

*Image processing in Dry-Offset and Flexo goes much further than in conventional Offset. Thanks to many years of experience and a complete digital workflow, we can provide unlimited possibilities to manipulate artwork in order to create as sharp and clear an image as possible.*

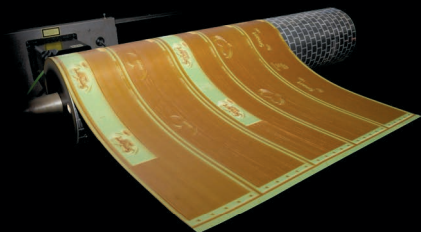

## ***Plates***

*To produce our plates, we use the latest and most advanced techniques in the field of plate-making. The quality of laser-engraved plates has set a new standard in the Dry-Offset industry. Today, high quality images can be so effortlessly printed with laser-engraved plates that over the last few years, laser-engraving has successfully competed with the quality of in-mould labeling. Also the costs involved are several times lower than those associated with in-mould labeling. So the choice is a very easy one to make. Besides laser-engraving and CTP UV-exposing we still use our conventional procedures. Our own special exposing technique guarantees the highest quality possible in conventional plate-making.*

*If you would like to receive more information, please do not hesitate to contact us or visit our website.*
